

EXERCISE - ABSTRACTION AND ENCAPSULATION

Similar to a library management system, write a program to provide layers of abstraction for a car rental system.

Your program should perform the following:

1. Hatchback, Sedan, SUV should be type of cars that are being provided for rent
2. Cost per day:
 - Hatchback - \$30
 - Sedan - \$50
 - SUV - \$100
3. Give a prompt to the customer asking him the type of car and the number of days he would like to borrow and provide the fare details to the user.
